

INTERNALLY ILLUMINATED FISHING ROD

ABSTRACT

5 An illuminated fishing rod, suitable for night fishing, comprising a
hollow core and a light source positioned within one end of the hollow core
and the light waves from the light source being directed towards the opposite
end of the hollow core. The light waves are directed external to the rod by
various means including a tapered hollow core, light refractors and other
10. abrasions. The power source for the light source can be located internal to a
handle portion.
